

M. BOHLKE VENEER CORP.

Preserving and Enhancing our Natural Resources

We have a strong commitment to the preservation and protection of the forests which supply our raw materials. We also comply with all forestry standards and regulations by working with timberland owners to responsibly harvest their trees in a selective manner. By purchasing our trees and logs from private landowners and government owned properties that hire state-certified foresters to mark mature trees for harvest, we are preserving our forests by leaving the smaller trees for further growth and future generations. In a time when timber regulations are becoming much more stringent, we pride ourselves on carrying a solid inventory of certified veneer and lumber.

Almost all of our domestic or North American species are FSC®, PEFC and CITES certified with a handful of our veneer coming from standing timber lots that were pre-classified by a certified forester to be FSC 100%. With regards to our imported inventory, not all of our species are certified, although completely and legally imported under the Lacey Act. The simple fact is that not all species can be classified as certified species, but we put the hardest effort into purchasing strictly certified wood when possible.

At M. Bohlke Veneer Corp., we also offer a wide selection of reclaimed wood products that align with our preservation and environmentally-friendly initiatives. In the production of wood products there are many salvageable by-products as well as reclaimed wood that can be reused for a variety of different applications; this is where our reclaimed wood inventory becomes a treasure chest for hobbyist woodworkers. We stock a variety of reclaimed wood items ranging from obscure table bases to large chunks of salvaged wood. Also, during veneer manufacturing, there are a couple of by-products such as backing boards and cores that are left over. Backing boards are the thin planks of wood that are left over on the machine after slicing. Cores are the cylindrical chunks of wood that are left over after peeling. The backing boards can often be stripped down and used for thin lumber or flooring, while the cores are often used by wood-turners and carvers. We also have a variety of obscure tree roots, trunks and other pieces in our inventory.

To learn more about MBVC certified woods, our reclaimed wood inventory, or to receive samples, please call us today at 513-682-1460, or email sales@mbvener.com.

Certified Wood

Certified Wood Species List

AFROMOSIA
ALDER EUROPEAN
ANDIROBA
ANIGRE
ASH
ASH, EUROPEAN
ASH OLIVE EUROPEAN
BEECH, EUROPEAN
BIBILO
BIRCH
