Improving nature's perfection.

Engineered, or reconstituted, veneer (Vtec) is an innovative and cost-effective alternative to traditional wood veneer. When consistent color and pattern are needed throughout an entire project, Vtec is your answer. Vtec veneer is real wood, engineered through a patented process, allowing the reproduction of nature's rich and beautiful grain patterns with uniformity and consistency. Consistent color, grain structure and pattern that is impossible directly from nature is now possible with Vtec. With our Vtec veneer, you can create matching surfaces (doors, desks, paneling, and more) in large quantities. Years from now, you can purchase Vtec that will match your original purchase.

Our engineering process is eco-friendly: we replicate exotic patterns (such as ebony or teak) from fast growth trees. You get the exquisite look of an exotic veneer at an affordable price. Vtec is favored by millworkers, designers and architects; we offer Vtec in over 40 patterns. Manufactured and certified in accordance with ISO 14001 and available as FSC® certified.

Bamboo

Consistency in nature.

We offer bamboo veneer and solid bamboo panels. The veneer is created by slicing sheets from laminated blocks made from strips and has a thin, strong, fleece backing making it easy to press on panels. Bamboo is a sustainable product as it is the fastest growing plant in the world. Although it is a grass, bamboo has hardwood-like properties and contains the same consistency as engineered veneer. All of our bamboo products are available as FSC® 100% material; our bamboo products are produced without urea formaldehyde (NAUF) and are CARB compliant.

The distinct look of bamboo has aroused increased popularity of this appealing plant. You'll find furniture, kitchens, store fixtures, flooring, walls and ceiling panels beautifully adorned with bamboo's striking qualities.

M. Bohlke Corp. brings you quality bamboo veneer in caramel and khaki tones. Our 'flat cut' features a wide grain 3/4" pattern and our 'quarter cut' offers a narrower grain of 1/4". Each is sure to make your project visually stunning in its own way. Our bamboo veneer is available in 4' x 8' and 4' x 10' sheets.
