Bases

Boules

Entire sawn logs, superior grain matching | 4/4, 8/4, 10/4

Curupau

Color and aesthetic appeal
Natural oils, density, hardness
Versatility

8/4 Boules
10/4 FAS&BTR

This unique South American wood shares many qualities with true Rosewood which make it an appealing alternative. Curupau's oils help protect its grain, ideal for projects where longevity is essential. And although this species has its own unique grain patterns, the dramatic color variation and streaks certainly evoke a similar look to Rosewood. These shared characteristics make Curupau an excellent choice for high-end furniture and specialty woodwork where durability and beauty are top priorities.

Cocobolo

Beautiful, rich colors
Especially lustrous
Tonewood

4/4, 8/4, 16/4 Boules

Cocobolo is part of the *Dalbergia* family and is considered a true Rosewood—it is celebrated and sought after for its vibrant colors and beauty. This species' high oil content makes it exceptionally smooth and eye catching, while also enhancing its naturally warm glow. Cocobolo stands out for high-end furniture, decorative items, and musical instruments.

Grenadillo

Similar range of colors

Durable and resistant to wear

Tonewood

**12/4, 16/4 Boules
6/4 FAS&BTR**

Grenadillo is a stunning, premium hardwood that embodies the elegance and richness associated with Rosewood. Its deep, reddish-brown tones can be highlighted with figure, giving it a refined and classic look. Beyond its beauty, its similarity in tonal properties and performance makes Grenadillo popular for applications in fine furniture and musical instruments.

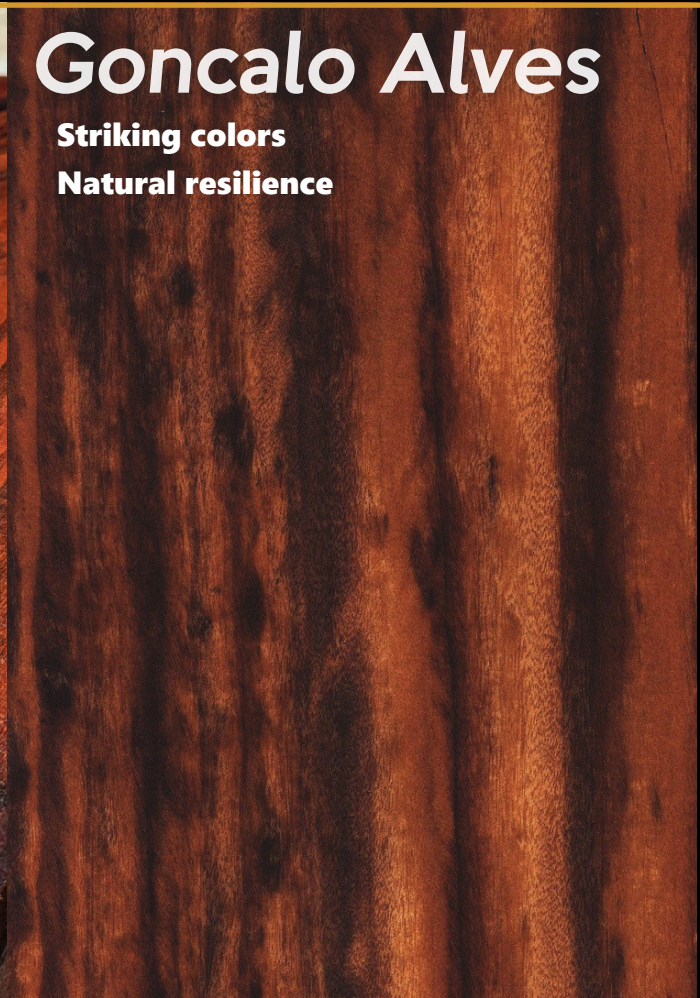

4/4, 8/4 FAS&BTR

Zebrano | 8/4 FAS&BTR

Amara Ebony 5/4 FAS&BTR

Zebrano 8/4 FAS&BTR

M. BOHLKE LUMBER

For consistency, consider boules

The wood trim above illustrates how using mixed lumber can affect an end millwork product. While attempting to create fluidity with the trim by using mixed lumber, the same species was selected but the color does not quite match. This unfortunately caused noticeable differences where two pieces meet (see arrows at the joints). This can be a common problem when using traditional mixed lumber because square edge of the same species and from the same pallet does not come from the same tree.

Enter boule form lumber (pronounced bool), a ready solution to an avoidable problem. These logs are cut lengthwise through their entirety, creating individual

slabs, and then are put back into sequential form for purchase of the whole log together. Slabs of a boule share commonality and inherent characteristics with every other slab in the log. This means that boule form lumber guarantees same color, grain structure and size from one board to the next. Because of this stellar consistency as a result of each board coming from the same tree, high-end woodworkers and yacht builders, for example, prefer boule lumber.

We currently offer over 35 species in a wide range of thicknesses in boule form.

Sipo

European Sycamore

Our lumber is backed by our veneer and 175,000+ square ft. warehouse. We carry 75+ species in FAS lumber, premium boules, live edge slabs, and more.

Sustainably using one of Earth's most beautiful resources to enrich the world around us.
